Professional Profile

Full-stack Software Engineer with 2 years of experience building scalable web and mobile applications using React, Spring Boot, .NET, and cloud platforms. Experienced in designing end-to-end systems, deploying production-ready applications, and improving engineering workflows through CI/CD and AI-assisted code review.

Technical skills

Programming Languages	Typescript, Java, C#, JavaScript, Python
Front-end Development	React, React Native, Expo, Zustand, Tailwind CSS
Back-end Development	.NET Core, Spring Boot, Node.js, Express.js, Flask
Database	PostgreSQL, SQL Server, MySQL, Supabase, Firebase
Cloud & DevOps	AWS (Lambda, S3, SNS, EC2, RDS), Azure (VM, PostgreSQL, Blob Storage), Docker, GitHub Actions, Vercel, Render, Nginx
Tools & Others	Git, AI-assisted Code Review, Clerk Auth, Cloudinary, Playwright, Jest, LangChain, RAG, YOLOv5, Figma, Agile (Scrum)

Professional Experience

Team Lead 07/2025 – Present

Blotz App**, Sydney, New South Wales, Australia (**GitHub Repository**)**

- Led end-to-end development of an AI-powered productivity mobile app using **React Native**, **Expo** and **.NET** to help users manage procrastination and ADHD-related task challenges.
- Designed and implemented a **task breakdown (subtask) system** to address users' difficulty in managing large, overwhelming tasks, improving task clarity and completion rates with a responsive, high-performance cross-device UI
- Built a scalable backend-driven **Badge & Reward System** using **.NET Core** and **SQL Server**, introducing gamification to incentivize user engagement and reduce procrastination
- Owned **feature planning, technical design, and PR reviews**, ensuring code quality and alignment with product goals across the team
- Translated **user feedback and behavioral insights** into actionable features. Collaborated with designers, product managers, and stakeholders to translate requirements into technical solutions. Participated in Agile development, including sprint planning, stand-ups, and iterative delivery.
- Co-founded and scaled the product from 0 → 2,000+ users on the testing waitlist, validating product-market interest

Technology Officer 09/2025 - Present

Skill Swap Club**, The University of Sydney, New South Wales, Australia**

- Built a full-stack platform to streamline skill-sharing event discovery and management using **React** and **Spring Boot**, improving how students host, discover, and participate in workshops.
- Designed and implemented a **moderation and approval workflow** for user-submitted workshops, ensuring content quality and preventing spam through role-based access control.
- Developed a **Markdown-based content management system** for event "memory pages", enabling structured knowledge retention and improving community engagement
- Designed a **version-based optimistic locking mechanism** for Markdown content editing, detecting write conflicts and rejecting stale updates to maintain data integrity in concurrent admin operations.
- Built a **notification system** to keep users informed of workshop approvals, updates, and participation status, improving engagement and responsiveness.
- Deployed the platform with **Vercel** for the React frontend and **Azure VM** for a Dockerized Spring Boot backend, integrating **Azure PostgreSQL**, **Azure Blob Storage**, **Clerk authentication**, **Nginx** reverse proxy, and HTTPS/TLS. Automated the full release cycle with a **GitHub Actions pipeline** (Gradle build → Docker push to GHCR → SSH redeploy), eliminated manual artifact transfer and reduced backend deployment to a single PR merge.
- Designed and configured a **human-in-the-loop AI-assisted PR review workflow** in **GitHub Actions** using OpenAI and Claude APIs to compensate for limited reviewer bandwidth. Implemented a two-phase context-first

pipeline with anti-loop quality gates (comment quality gating, root-cause deduplication) to surface high-signal inline comments, while keeping final merge decisions under manual engineering judgement
- Collaborated with club co-founder and cross-functional teams to translate operational needs into product features.

Web Developer Internship 08/2025 – 12/2025
BuildLess.online**, Sydney, New South Wales, Australia**
- Contributed to a no-code/low-code platform that enables users to rapidly build interactive web applications using JSON-based configurations, reducing the need for manual frontend development
- Engineered **modular and reusable UI components** with **React** and **Tailwind CSS**, improving development efficiency and maintainability across the platform
- Developed and validated **Firebase Security Rules** for Firestore and Storage, using the local emulator suite to ensure secure and reliable access control.
- Established **end-to-end testing (Playwright)** and **unit testing (Jest)**, improving system reliability and reducing regression issues
- Collaborated with product owners and developers in an Agile environment, iterating on features based on user and stakeholder feedback

Algorithm Engineer 09/2022 – 04/2024
Guangdong Create Environmental Technology Co., Ltd, China
- Built and deployed an AI-powered onboarding chatbot using **LangChain** and ChatGLM3, with a Gradio based front-end for interactive Q&A, automating responses to employee policy queries and reducing HR workload.
- Designed and implemented an intelligent risk assessment system using **Retrieval-Augmented Generation (RAG)** and LangChain, automating insurance document analysis and significantly reducing manual review time.
- Designed and implemented a behavior detection and water pollution monitoring system using **YOLOv5**, enabling enterprises to monitor environmental risks and ensure timely equipment maintenance
- Collaborated with cross-functional teams to deliver solutions from research to deployment, ensuring robustness, safety, and regulatory compliance in production systems.

Personal Project Experience

Distributed E-commerce Platform 10/2025
- Built a microservices-based e-commerce system using **Spring Boot** and **RabbitMQ**, integrating services for order, payment, and delivery
- Implemented **Saga** pattern and **Outbox** pattern to ensure data consistency across distributed transactions
- Designed fault-tolerant mechanisms including retry logic, optimistic locking, and dead-letter queues for reliable message processing

AWS Cloud-Native Image Captioning and Thumbnail Generation Platform 05/2025
- Designed and deployed a scalable web application using Flask on EC2 with Auto Scaling and Application Load Balancer
- Implemented serverless workflows with AWS Lambda and SNS to automate image captioning and thumbnail generation
- Built a secure and high-availability storage architecture using Amazon S3 and Aurora MySQL

Education Background

The University of Sydney 07/2024 – 09/2026
Master of Computer Science
Core Courses: Data Structures and Algorithms, Enterprise Scale Software Architecture, Design of Networks and Distributed Systems, Cloud Computing, Web Application Development, Object-oriented Programming

Beijing Normal - Hong Kong Baptist University 09/2018 – 06/2022
Bachelor of Business Administration (Honours) in e-Business Management and Information Systems
- **Core Courses:** Big Data Analysis and Application, Database Management, Design and Analysis of Algorithms,
- **Awards:** Second Class Award in Scholarship for the 2021-2022 academic year, 2022 MCM Honourable Mention
